

Alcat.

alcohol, in a solvent chosen from ethers, at a temperature of between  $-20^{\circ}\text{C}$  and  $50^{\circ}\text{C}$ , in the presence of sodium fluoride which is in the form of a powder whose grains have a specific surface of greater than or equal to  $0.1 \text{ m}^2/\text{g}$ .

R.124  
20

21. (New) Process according to Claim <sup>19</sup>20, characterized in that the grains of sodium fluoride have an average diameter of less than or equal to  $20 \mu\text{m}$ .

R.126  
21

22. (New) Process according to Claim <sup>19</sup>20, characterized in that the carbonyl fluoride is introduced gradually into the reaction medium which contains the alcohol.

R.126  
22

23. (New) Process according to Claim <sup>19</sup>20, characterized in that the amount of carbonyl fluoride used is from 1.1 to 2 mol per mole of alcohol.

R.126  
23

24. (New) Process according to Claim <sup>19</sup>20, characterized in that the carbonyl fluoride is obtained by reacting phosgene, diphosgene or triphosgene, or a mixture thereof, with an excess of sodium fluoride powder whose grains have a specific surface of greater than or equal to  $0.1 \text{ m}^2/\text{g}$  and/or an average diameter of less than or equal to  $20 \mu\text{m}$ , in a solvent chosen from polar aprotic solvents, at a temperature of between  $25^{\circ}\text{C}$  and  $120^{\circ}\text{C}$ , and after passage of the gases present into a condenser whose temperature is between  $0^{\circ}\text{C}$  and  $-50^{\circ}\text{C}$ .

R.128  
24

25. (New) Process according to Claim <sup>19</sup>20, characterized in that the amount of sodium fluoride used during the reaction

A' cont.

of the alcohol with carbonyl fluoride is between 1.1 and 2 mol per mole of the alcohol.

R.126

25.

26. (New) Process according to Claim <sup>19</sup>26, characterized in that for the reaction of the alcohol with carbonyl fluoride, the solvent is chosen from tert-butyl methyl ether, dioxane, tetrahydrofuran, 2-methyletetrahydrofuran, dibenzyl ether, ethylene glycol dimethyl ether and polyethylene glycol dimethyl ethers.

R.126

26.

27. (New) Process according to Claim <sup>19</sup>27, characterized in that the fluoroformate obtained is purified by treating it with an alkaline fluoride.

R.126

27.

28. (New) Process according to Claim 20, characterized in that 1 to 3% by weight of dimethylformamide is added to the fluoroformate solution.

R.126

28.

29. (New) Process according to Claim <sup>22</sup>29, characterized in that, when it is a solid, the fluoroformate is obtained in crystalline form by adding to the fluoroformate solution a compound which does not dissolve the fluoroformate, chosen from a polar aprotic solvents, after which the fluoroformate is made to precipitate.

R.126

29.

30. (New) Process for preparing carbonyl fluoride, characterized in that phosgene, diphosgene or triphosgene, or a mixture thereof, is reacted with an excess of sodium fluoride powder whose grains have a specific surface of

21 cont.

greater than or equal to  $0.1 \text{ m}^2/\text{g}$  and/or an average diameter of less than or equal to  $20 \mu\text{m}$ , in a solvent chosen from polar aprotic solvents, at a temperature of between  $25^\circ\text{C}$  and  $120^\circ\text{C}$ , and the gases present are then passed into a condenser whose temperature is between  $0^\circ\text{C}$  and  $-50^\circ\text{C}$ .

20.  
21. (New) Process according to Claim <sup>29</sup>30, characterized in that the grains of sodium fluoride have a specific surface of greater than or equal to  $0.1 \text{ m}^2/\text{g}$ .

21.  
22. (New) Process according to Claim <sup>29</sup>30, characterized in that the grains of sodium fluoride have an average diameter of less than or equal to  $20 \mu\text{m}$ .

22.  
23. (New) Process according to Claim <sup>29</sup>30, characterized in that the amount of sodium fluoride reacted with the phosgene is from 3 to 5 mol per mole of phosgene.

23.  
24. (New) Process according to Claim <sup>29</sup>30, characterized in that the phosgene and/or its precursors are introduced gradually.

24.  
25. (New) Process according to Claim <sup>29</sup>30, characterized in that the solvent is acetonitrile.

25.  
26. (New) Process according to Claim <sup>29</sup>30, characterized in that it is performed with anhydrous compounds and under anhydrous conditions.

26.  
27. (New) Process according to Claim <sup>29</sup>30, characterized in that the liquids condensed by the condenser are recycled
